Hi Lisa,

I've attached the notes that Dorian had from February with one correction (I've replaced the monitoring pedometers which are actually piezometers with monitoring wells). "non-responsive"  
"non-responsive"

The only other new development since Feb/07 is that we now have an executed agreement between the City and Imperial Oil Limited (IOL). This gives IOL the opportunity to access the property north of the Transit facility to install monitoring wells and take soil samples. They are also required to submit all of the results to the City and allow us to take additional samples from their investigation for our own testing. We have yet to hear when this is to be scheduled.

"non-responsive"

Sincerely,

Susan

Hi Susan. We have had no media interest related to the handout. I think a very high level Briefing Note for the Mayor and City Councillors with the handout attached is likely a good idea, for this event and anything potential in the future. That way they have an idea of the background.

I would see that as a memo that lays out in point form this history and most recent developments. But again, I would keep it very high level and as concise as possible.

If you could prepare that, I'd be happy to take a look to proof and help wordsmith.

Lisa
